DETAILED ACTION

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: SURFACE-MOUNT CRYSTAL OSCILLATOR
HAVING AN OPENED PORTION OF THE SIDEWALLS.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 2 and 4 of copending Application No. 10/636,881. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 is broader recitations than the claim of the copending application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hatanaka et al. discloses a surface mount piezoelectric oscillator having an upper cavity and a lower cavity.

Kotzan et al. discloses a double-sided oscillator package.

Luff discloses a dual-cavity temperature compensated crystal oscillator.

Harima disclose a surface-mount crystal oscillator of Application No. 10/626,881.

JP 2003179433 discloses a surface-mount crystal oscillator having U-shape coupler.

JP 2004153468 discloses a surface-mount crystal oscillator having protrusion formed and inserted into opening surface side. (Pub-date 5/27/04).
